SUMMARY

I am a junior web developer with expertise in developing single-page web applications using React, as well as ensuring they are responsive and visually appealing through the use of styled components. I have a comprehensive understanding of JavaScript, HTML, and CSS and am passionate about applying my knowledge to create high-quality web experiences.

TECHNICAL SKILLS

- Proficient in HTML, CSS, and JavaScript.
- Basic knowledge of Bootstrap 5.
- Strong understanding of React and its principles.
- Good knowledge of React Routers, Redux, and other libraries.
- Familiarity with front-end development tools such as Git, Webpack, Babel, and NPM.
- Familiarity with back-end development concepts and technologies such as Node.js, Express, and RESTful APIs.

PROJECTS

Multi Step Form

multi-step forms use React Router to manage the steps of the form. I have implemented validation checks to ensure that users provide sufficient information before proceeding to the next step. To manage the state of the form, I have used the useContext hook, which provides a simple and effective way to share state across different components.

Shopping Cart App

I have experience building a shopping cart demo for an e-commerce website using React. The cart allows users to add products and adjust quantities, with Redux used for state management. React Router is used to create separate routes for the home page and cart, providing seamless navigation.

KEY SKILLS

HTML & CSS

Bootstrap

Javascript

React Js

Git & GitHub.

COURSE

Frontend Developer

I recently completed a Frontend web development course at WelTec Institute, where I gained a solid foundation in web development by learning both basic and advanced concepts.
